

FERRITE TRANSFORMERS

The production of ferrite components for use in high-frequency are made in every geometry: RM-EP-P-ETD-ER-EC-EF-U cores

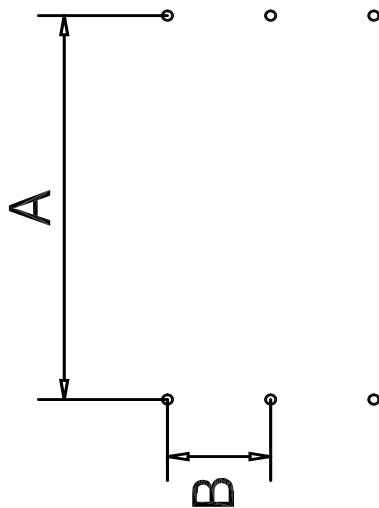

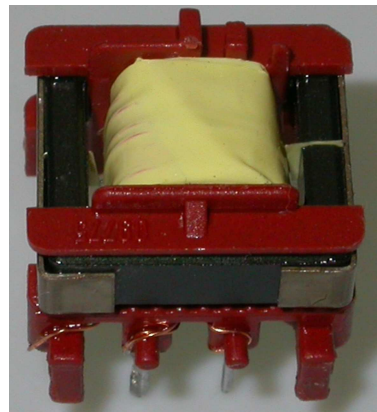

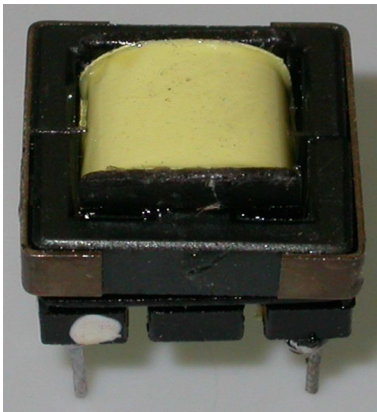

The applications are numerous: filter, transformer, elevator, impulse transformer, etc.

these are realized in according with the requirement of each electronic circuit

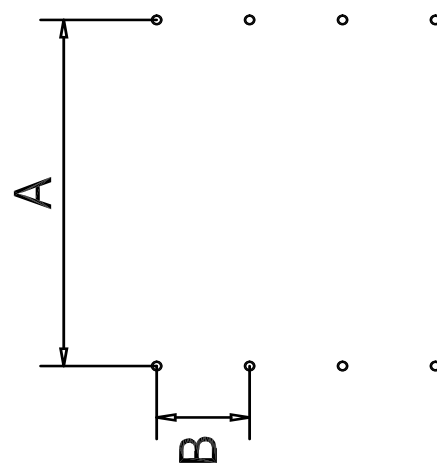

We form into a group the most important geometries with dimensions, steps and photo example, particular ferrite on request

Every geometries can be realized in horizontal or in vertical, open or potted
